ABSTRACT OF THE DISCLOSURE

A communication technique is provided for realizing transmission/reception of an operation request and an operation response to a received operation response performed between a
5   plurality of communication apparatuses that are arranged to either transmit a communication request and receive a communication response to this communication request or receive a communication request and transmit a communication response to this communication request. The communication apparatus may
10 correspond to an HTTP client that collectively sends to an HTTP server a client command that is to be sent to the HTTP server and a response to a server command that has been received from the HTTP server in one batch as an HTTP request, or the communication apparatus may correspond to the HTTP server that
15 collectively sends a server command that is to be sent to the HTTP client and a response to a client command that has been received from the HTTP client in one batch as an HTTP response.
